

# TERRA 4D Tracker App

Mobile Add-On to TERRA 4D

FAST's Tracker app is the mobile add-on to TERRA 4D. It connects mobile forces with operators in control rooms for efficient collaboration and communication. It's the ultimate tool for superior situation awareness and exchange of critical real-time information.

- Receive target coordinates from operator including text messages
- Start of an intervention and independent navigation to target waypoint

- Raise different alarm events and send to operator in control room
- Process interactive incident reports on mobile device

- Allows GPS position tracking of mobile devices in control room
- Recording of historical tracks over time

- Schedule maintenance tasks and send interactive maintenance reports including coordinates

- Send pictures and text messages from mobile device to operator in command & control centre

- Send and receive messages and images from operator to intervention teams
